

Solar Intercept 3

What makes SOLAR Intercept3 so advanced?

SI3 high performance LoE glass has been specially formulated to work with seasonal temperature changes without affecting your view. In summer SI3 rejects the sun's damaging rays, letting in more pure clear light without the heat. In winter, it helps keep heat inside and insulates against the cold, so your sunroom stays comfortable all year long!

How does SOLAR Intercept3 work to control comfort?

SI3 utilizes a new patented 12 layer rare element clear coating technology, which includes 3 layers of silver arranged in a precise sequence of layer thickness, producing a glass with such advanced heat interception qualities, it will raise your outdoor living experience to an unprecedented level!

Why is SOLAR intercept3 glass the best choice for your sunroom?

Think of SI3 as a clear insulation, protecting you from summer's oppressive heat as well as winter's penetrating cold. SI3 offers the ultimate combination of pure light stream and heat reflection, the key factor to your comfort and satisfaction in outdoor living.

SOLAR Intercept 3, the new glass standard in the reduction of thermal transmission, might just make other types of LoE glass...
